Verdandi™

Warehouse Execution System

The Verdandi System is developed in Älmhult, in the heart of Sweden.

We are

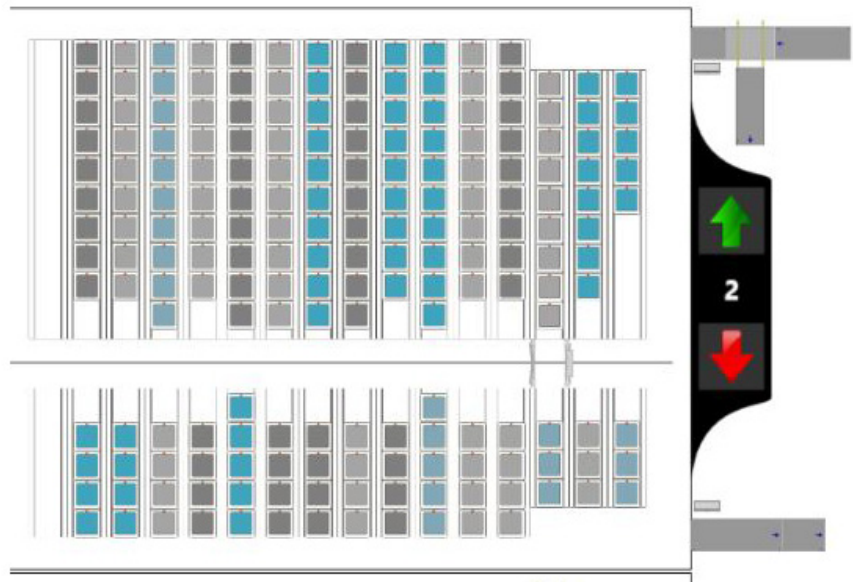

Introduction

TEXO Verdandi WES (Warehouse Execution System) is a combined warehouse management system (WMS) and warehouse control system (WCS) platform that manages everything from the physical to the logical aspects of a warehouse or distribution center.

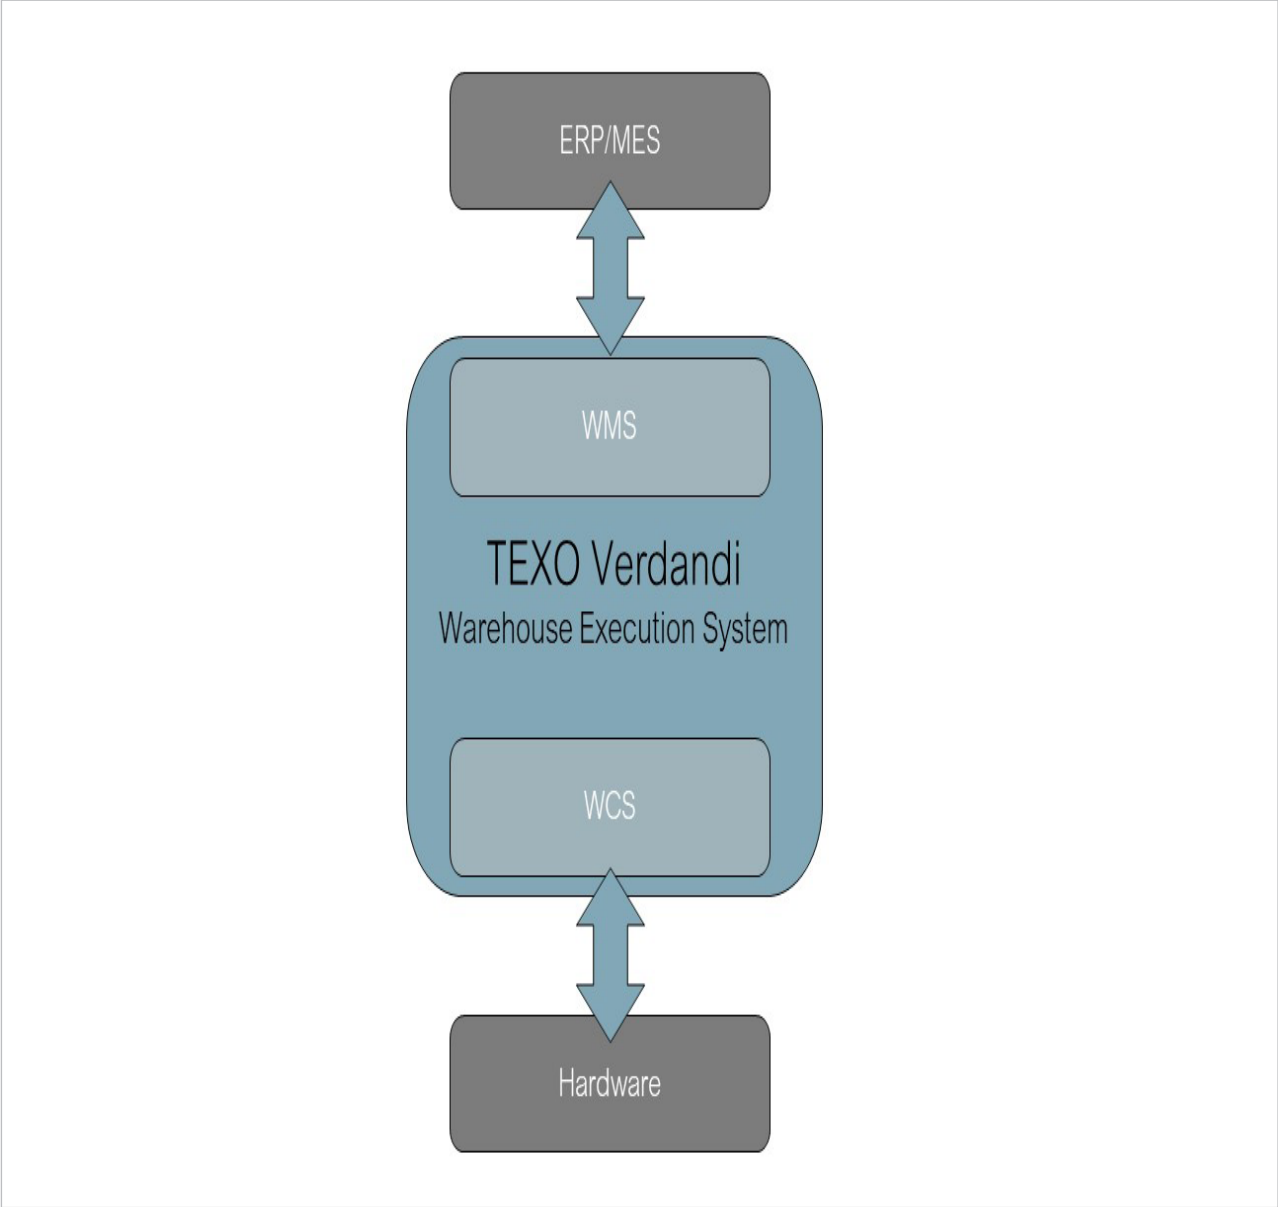

Operation

The Verdandi WES stores the information on different products that are being stored and manages operations from incoming goods through processing, storage, order fulfillment, and dispatch in real-time.

TEXO Verdandi WES provides an interface for your current Enterprise Resource Planning system, or Warehouse Management System for full interoperability between the systems. With RFID tags or a barcode, you can determine what kind of goods and quantity is stored on the pallet.

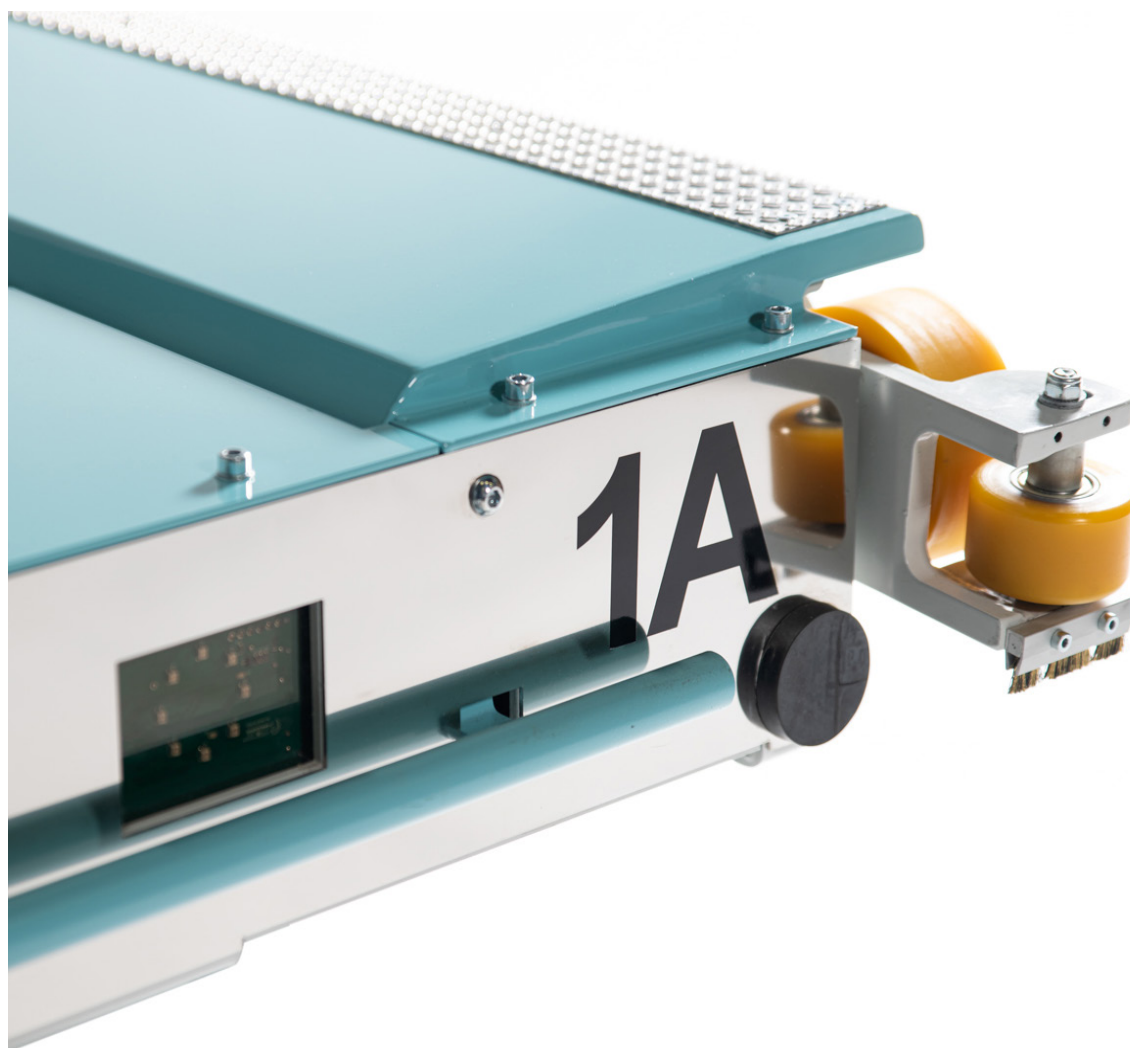

The Verdandi shows every action happening inside the system. A user friendly interface makes it very easy to use.
